			Auth Module					
	Description	End Point	Expected Result	Actual Result	 Severity 	Priority	Status	Reason of Rejection
User sign-up fails due to missing backend-required fields not present in form	During user registration, the API returns validation errors for fields like responseTimeInHours, expertIn, and country. However, the frontend form only provides username, email, and password, making it impossible for the user to complete signup.	auth/create	Signup should succeed with the fields provided, or return clear feedback if role-specific fields are missing only when applicable.	Signup fails with required fields that were never requested on the frontend	Critical	P0	Fixed	
Signup fails due to missing fields not present on UI (responseTimeInHours, expertIn, country)	While testing user signup, the API rejects valid signup requests due to required fields (responseTimeInHours, expertIn, country) that are not included in the frontend form.	auth/user/create	API should only validate fields required based on role.	Signup fails with validation errors not visible to the end user.		P0		
Weak Password Accepted	Signup allows weak passwords without warning	auth/signup	Should show: "Please use a stronger password"	Weak password is accepted	Major	P1		
Name Field Accepts Invalid Input	Signup form allows numbers and special characters in First Name and Last Name fields.	auth/signup	Validation should restrict input to alphabetic characters only	Name fields accept numbers and special characters without error	Major	P1		
Empty Fields Allowed	Signup form allows submission with empty email and password fiel	auth/signup	Validation errors should appear for required fields	Form submits	Critical	P1		
UTH_VAL_005 Forgot Password Accepts Unregistered Email	Forgot Password accepts an unregistered email and shows a success message	auth/signup	Should show: "Email not found"	give 200 status	Critical	P1	Fixed	
			Skill and Category Module					
Title	Description	End Point	Expected Result	Actual Result	 Severity 	Priority		Reason of Rejection
category Name Accepts Numbers via API	The category Skill creation API allows numeric values in the 'skillNa which should be alphabetic only.	category/create	API should return a 400 error with validation message for invalid skill name	API returns 200 OK and skill is create with a numeric name	Major	P1	Fixed	
category Name Accepts Blank Value	The category creation API allows submission with an empty 'skillNa resulting in invalid data creation.	category/create	API should return 400 Bad Request with validation error for empty field	API returns 200 OK and creates a skill with blank name	Major	P1		
PLCategory_003 Get All Categories Returns Empty	The API for fetching all categories returns an empty response even though categories exist in DB.	category/create	API should return a list of all existing categories	API returns 200 OK but with an empty	Major	P1	Fixed	
			Add a Skill Card					
Title	Description	End Point	Expected Result	Actual Result	 Severity 	Priority		Reason of Rejection
Skill Name Accepts Numbers via API	The Skill creation API accepts numeric values (e.g., "123") in the 'skillName' field, violating validation rules.	skill/create	API should return a 400 error with a validation message like "Skill name must contain letters only"	API accepts numeric skill name and returns 200 OK	Major	P1	Fixed	
Skill Created Without Image	Skill creation API allows submission without any imageURL, although image is mandatory on frontend.	skill/create	API should return a 400 error: "At least one image is required	API returns 200 OK and skill is create without an image	Major	P1		
LSKILL_003 Skill Created Without Delivery Time	The Skill creation API allows submission without `deliveryIn`, although it's required for packages	skill/create	API should return 400 Bad Request with message: "Delivery t is required" API returns 200 OK and skill is created without delivery time	API returns 200 OK and skill is create without an delivery Time	Major	P1	Fixed
